

PAT Light Curtain Safety-Start System

The PAT Light Curtain Safety-Start System fits directly on your existing welder base or table top, improves productivity and provides safety for your operators and other personnel.

The LCSS System protects the operator because the welder cycle cannot be initiated when the operator is inside the light curtain. The LCSS system is guarded on the sides to prevent others from having easy access to the weld area. The operator needs to contact only one palm button to start the welder cycle and does not have to maintain the start input due to the integrated safety features. This results in increased productivity allowing the operator to perform other duties while the ultrasonic unit goes through its weld cycle.

LCSS - PAT Light Curtain Safety-Start System

Features:

- Compatibility with Branson 900 or 2000 Series Welders
- Superior construction and quality components
- Attractive aluminum extrusions form the base and walls for supporting the PAT Light Curtain Safety-Start System
- Polycarbonate side-shields provide clear view of the weld area
- Uses the palm buttons on the welder base to initiate the welding cycle
- Easy installation. No hard wiring or special interfaces
- Easily integrates with PAT Slim Line Welder Table
- Optional PAT Part Bin Rail will position components close to the work zone enhancing productivity

Part Number	Product
