

PAT Safety Sound Enclosure

PAT's Ultrasonic Welder Safety Sound Enclosure accommodates most major brand ultrasonic welders. The enclosure includes the PAT Slim Line Welder Table providing a portable workstation.

The SSE System protects operators from potentially harmful ultrasonic noise, reducing sound energy by more than 25-decibels via a small chamber sound absorbing system. The front door automatically moves up and down providing easy front and side entry access for loading and unloading of parts. Large polycarbonate windows allow for clear operator visibility to the welding operation when the sliding door is closed. The welder cycle is initiated when the door is closed allowing the ultrasonic welder to be setup for optimum weld efficiency versus the welder contending with the speed of the enclosure door.

Features:

- PAT Slim Line Welder Table with drilled and tapped table top, swivel casters, power supply shelf and 2nd shelf for computer, fixtures, horns or other miscellaneous items.
- Direct compatibility with Branson Welders, and with other welder brands
- Attractive, light, but rigid construction using aluminum extrusions and framed sound reduction panels
- Superior construction and quality components
- Large Polycarbonate windows for operator visibility
- Easy panel removal for access to welder for service
- Includes PAT Palm-1 start and emergency stop button interface
- Integrates with PAT's Film Winders to prevent part scuffing

Part Number	Sound Enclosure Models
SSE	Safety Sound Enclosure, Slim Line Table and swivel casters
SSE-C4	Safety Sound Enclosure, Slim Line Table and C4 mount leveling casters
